Sequence 86, Application US/08874825

Patent No. 6057101

GENERAL INFORMATION:
APPLICANT: Nandabalan, Krishnan
APPLICANT: Rothberg, Jonathan
APPLICANT: Rang, Meijia
APPLICANT: Kanght, James
APPLICANT: Kalbfleisch, Theodore
TITLE OF INVENTION: IDENTIFICATION AND COMPARISON OF
TITLE OF INVENTION: AND IDENTIFICATION OF INHIBITORS OF THESE INTERACTORS
ITLE OF INVENTION: AND IDENTIFICATION OF INHIBITORS OF THESE INTERACTORS
CORRESPONDENCE ADDRESS:
ADDRESSEE: Pennie & Edmonds
STREET: 1155 Avenue of the Americas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         11.0%; Score 8; DB 1; Length 12; 100.0%; Pred. No. 2.8e+02; tive 0; Mismatches 0; Indels
              COMPUTER READABLE FORM:
MEDIUM TYPE: FIDDPY disk
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
COMPATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/779,355
PLING DATE: 06-JAN-1997
CLASSIFICATION: 435
PLING APPLICATION WHERE: US/08/775,993

Patent No. 6657101
GENERAL INFORMATION:
APPLICANT: Nandabalan, Krishnan
APPLICANT: Rothberg, Jonathan
APPLICANT: Raight, James
APPLICANT: Kaight, James
APPLICANT: Kaight, James
TITLE OF INVENTION: IDENTIFICATION AND COMPARISON OF
TITLE OF INVENTION: PROTEIN-PROTEIN INTERACTIONS THAT OCCUR IN POPULATIONS
TITLE OF INVENTION: AND IDENTIFICATION OF INHIBITORS OF THESE INTERACTORS
NUMBER OF SEQUENCES: 122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ô

Batent No. 6265213

GENERAL INFORMATION:
APPLICANT: Morgan, Antony R.
APPLICANT: Severini, Alberto
TITLE OF INVENTION: Compositions and Methods for Determining the Activity
TITLE OF INVENTION: of DNA-Binding Proteins and of Initiation of
TITLE OF INVENTION: Transcription
FILE REFERENCE: DNAB-02921
CURRENT APPLICATION NUMBER: US/09/593,323
CURRENT FILING DATE: 2000-06-13
PRIOR APPLICATION NUMBER: 09/344,300
PRIOR FILING DATE: 1999-06-24

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GENERAL INFORMATION:
APPLICANT: Inoue, Takakazu
TITLE OF INVENTION: Method of Amplifying DNA Fragment, Apparatus for Amplifying DNA F
TITLE OF INVENTION: agenet, Method of Assaying Microorganisms, Method of Analyzing Mi
TITLE OF INVENTION: agenet, Method of Assaying Microorganisms, Method of Analyzing Mi
TITLE OF INVENTION: nisms and Method of Assaying Contaminant
TITLE OF INVENTION: 1992-03-7
CURRENT PAPLICATION NUMBER: 1999-03-30
EARLIER APPLICATION NUMBER: 1999-03-31
EARLIER PILING DATE: 1999-03-16
EARLIER FILING DATE: 1999-03-16
NUMBER OF SEQ ID NOS: 216
SEQ ID NO 185
LENGTH: 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 45, Application US/09594108

Sequence 86, Application US/09231303

Patent No. 6395478

GENERAL INFORMATION:

APPLICANT: Nandabalan, Krishnan

APPLICANT: Nandabalan, Krishnan

TITLE OF INVENTION: IDENTIFICATION AND COMPARISON OF PROTEIN-PROTEIN

TITLE OF INVENTION: IDENTIFICATION OF INHIBITORS OF THESE INTERACTIONS

FILE REPRENCE: 7934-087

CURRENT APPLICATION NUMBER: US/09/231,303

CURRENT FILING DATE: 1999-01-12

EARLIER PAPLICATION NUMBER: 08/663,824

BARLIER PAPLICATION NUMBER: 08/663,824

NUMBER OF SEQ ID NOS: 118

SOFTWARE: PATENTING DATE: 1996-06-14

NUMBER OF SEQ ID NOS: 118

                                                                                                                                                                                                                                                                                                                                         Sequence 112. Application US/09231303

Sequence 112. Application US/09231303

Patent No. 6395478

GENERAL INFORMATION:

APPLICANT: Nandablan, Krishnan

TITLE OF INVENTION: IDENTIFICATION AND COMPARISON OF PROTEIN-PROTEIN

TITLE OF INVENTION: INTERACTIONS THAT OCCUR IN POPULATIONS AND

TITLE OF INVENTION: IDENTIFICATION OF INHIBITORS OF THESE INTERACTIONS

FILE REFERENCE: 7934-087

CURRENT APPLICATION NUMBER: US/09/231,303

CURRENT FILING DATE: 1999-01-12

CURRENT APPLICATION NUMBER: 08/663,824

EARLIER FILING DATE: 1996-06-14

NUMBER OF SEQ ID NOS: 118

SEQ ID NO 112
                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

INFORMATION FOR SEQ ID NO: 226:
SEQUENCE CHARACTERISTICS:
LENGTH: 11 bases
TYPE: nucleic acid
STRANDEDNESS: single stranded
TOPOLOGY: linear
MOLECULE TYPE: other nucleic acid
DESCRIPTION: third strand derived from H. morrhuae
DESCRIPTION: third strand derived and DESCRIPTION: 133 region in Seq ID No. 5861244225

DESCRIPTION: 23s rRNA gene from Rhodobacter
DESCRIPTION: capsulatus (Accession # X06485) nucleotides
DESCRIPTION: 1038 to 1048
HYPOTHETICAL: no
ANTI-SENSE: no
ORIGINAL SOURCE:
ORRANISM: Rhodobacter capsulatus
        Length 11;
                                                                                                                                                                                                                                                                                                                                                  RESULT 521
UG-06-173-499C-265/C

Sequence 265, Application US/08173489C

Fatent UN- S861244

MOLECULE TYPE: genomic DNA
DESCRIPTION: 16s rMA gene from Chlamydia psittaci
DESCRIPTION: (Accession # M13769) nucleotides 203 to 213
                                                                                        10.7%; Score 7.8; DB 1; Length 11; 81.8%; Pred. No. 2.8e+02; Live 0; Mismatches 2; Indels
                                                                                                                                                                                                                                                                          RESULT 522

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         US-08-411-72,-5

JOS-08-411-72,-5

Patent No. 5705161

APPLICANT: WAN DER LEY, Peter Andre

APPLICANT: POCORANTON: Theuris

APPLICANT: POCORANTON: Deter Theuris

APPLICANT: POCORANTON: NAMINGENIC MENINGCOCCCAL LPS AND OTHER

TITLE OF INVENTION: IMMUNOGENIC MENINGCOCCCAL LPS AND VACCINE THEREFROM

NUMBER OF INVENTION: MEMBRANE VESICLES AND VACCINE THEREFROM

NUMBER OF INVENTION: AT HOMPSON

STREET: 745 SOUTH 237d Street, Suite 200

CITY: Arlington

STREET: VIGINIA

CONTURY: U.S.A.

ZIP: 22202

COMPUTER: ISM PC Compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIN NUMBER: US/08/411,727

FILING DATE: 01-MAY-1995

CLASSIFICATION NUMBER: NL 9201716

FILING DATE: 02-07-1992

REDICATION NUMBER: NL 9201716

FILING DATE: 02-07-1992

REIGN APPLICATION DATA:

APPLICATION NUMBER: NL 9201716

FILING DATE: 02-07-1992
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            10.7%; Score 7.8; DB 1; Length 12; 81.8%; Pred. No. 3e+02;

STATE: 220 MONTGOMERY STREET, SUITE 2200
STATE: CALIFORNIA
COUNTRY: UNITED STATES OF AMERICA
201P: 94104
COMPUTER READABLE FORM:
MEDIUM TYPE: Flopy disk
COMPUTER: IBM PC compatible
OPERATION SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/336,132
FILING DATE: 07-NOV-1994
ATTORNEY/AGENT INFORMATION:
NAME: CARROLL, PETER G.
RESISTRATION NUMBER: 13,637
REFERENCE/DOCKET NUMBER: 2,837
REFERENCE/DOCKET NUMBER: 3,837
REFERENCE/DOCKET NUMBER: 3,765-8410
TELEPHONE: (415) 397-338
INFORMATION FOR SEQ ID NO: 9:
SEQUENCE CHARACTERISTICS:
LENGTH: 12 base pairs
TYPE: nucleic acid
STRANDEDNESS: single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0; Mismatches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   원
                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 24, Application US/08484334
Patent No. 273379
GENERAL INFORMATION:
APPLICANT: REFF, Mitchell E.
TITLE OF INVENTION: IMPAIRED DOMINANT SELECTABLE MARKER
TITLE OF INVENTION: SEQUENCE AND INTRONIC INSERTION STRATEGIES FOR ENHAN
TITLE OF INVENTION: OF EXPRESSION OF GENE PRODUCT AND EXPRESSION VECTOR
TITLE OF INVENTION: OF SYSTEMS COMPRISING SAME
NUMBER OF SEQUENCES: 32

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       d
                                                                                                                                                           RESULT 579
US-08-874-825-85
US-08-874-825-85
i Sequence 85, Application US/08874825
i Patent No. 6057101
i GENERAL INFORMATION:
APPLICANT: Nothberg, Jonathan
APPLICANT: Rothberg, Jonathan
APPLICANT: Yang, Meijia
i APPLICANT: Kalbfleisch, Theodore
ITILE OF INVENTION: IDENTIFICATION AND COMPARISON OF
ITILE OF INVENTION: PROTEIN-PROTEIN INTERACTIONS
ITILE OF INVENTION: AND IDENTIFICATION OF INHIBITORS OF THESE INTERACTORS
NUMBER OF SEQUENCES: 122
CORRESPONDENCE ADDRESS:
ADDRESSE: Pennie & Edmonds

Sequence 24, Application US/09280999

Patent No. 6159730

GENERAL INFORMATION:

APPLICANT: REFF, Mitchell E.

TITLE OF INVENTION: IMPAIRED DOMINANT SELECTABLE MARKER

TITLE OF INVENTION: SEQUENCE AND INTRONIC INSERTION STRATEGIES FOR ENHAN

TITLE OF INVENTION: OF EXPRESSION OF GENE PRODUCT AND EXPRESSION VECTOR

TITLE OF INVENTION: SYSTEMS COMPRISING SAME

NUMBER OF SEQUENCES: 32

NUMBER OF SEQUENCES: 32

CORRESPONDENCE ADDRESS:
